Gym

Listening song

Experience

Mean Stack Developer Intern | July 2023 - Feb 2024
Luminar Technolab, Kochi

As a Mean stack developer, I've expanded my skill set to include AngularJS, ReactJS, NodeJS, JavaScript, and MongoDB. I've collaborated on both group and individual projects, gaining valuable experience in diverse tech environments, enhancing my proficiency, and delivering innovative solutions.

Projects

The weather app is a predictive tool utilizing HTML, CSS, Bootstrap, and JavaScript to forecast weather conditions. By analyzing data trends, it offers accurate updates on current and future weather patterns, enhancing user experience. HTML and CSS craft an intuitive interface, while Bootstrap ensures responsiveness. JavaScript enables dynamic data processing for reliable predictions, prioritizing user convenience.

Adven Tours, a travel website, employs HTML, CSS, and Bootstrap for an immersive user experience. Users effortlessly explore destinations and packages. HTML structures content, CSS enhances visuals, and Bootstrap ensures responsiveness. Detailed destination information empowers informed decisions. With its user-friendly interface, Adven Tours simplifies travel planning, inspiring adventurers confidently embark on memorable journeys

I hereby declare that all the information given above is true and correct to the best of my knowledge.
